300 Series Sliding Patio Door

Be Comfortable With Your Energy Bill

The energy savings performance of the Slocomb 300 Series Patio Doors have the combined factors of a Warm Edge spacer and High Performance Low-E glass. Combine these technologies with an Argon gas fill and you will maximize your energy performance and decrease your heating and cooling costs. In the winter months, Low-E helps keep heated air inside and cold air outside. In the summer, Low-E helps keep cool air in and hot air out. Low-E also blocks up to 84% of the harmful ultraviolet rays which can fade carpets, draperies and artwork. In addition since Argon gas is six times more dense than air, it greatly reduces the transfer of hot and cold adding even more thermal efficiency. It is this combination of Warm Edge and Low-E/Argon filled glass that helps you save on your heating and cooling costs.

Duralite™ Spacer System

To ensure your home will be comfortable during the intense heat of summer and the frigid winds of winter upgrade your new windows and doors to our high performance glass package with Duralite™.

- Lowest conductivity warm edge spacer
- Improved condensation resistance
- Superior argon gas retention
- Unique patented design
- Exceeds ENERGY STAR requirements

Glass Packages

Insulating glass maintains comfort, saves energy, and reduces outside noise. The 300 Series Patio Door insulating glass is made with the following high quality elements.

- Standard Double Strength Glass
- Standard Tempered Safety Glass
- Optional Low E Glass with Argon gas

Superior Energy Savings Performance With Three Low E Glass Packages*

Low-E ² Glass	Low-E ³ Glass	UltraFlect
U-Factor .27	U-Factor .27	U-Factor .22
Solar Heat Gain Coefficient .27	Solar Heat Gain Coefficient .22	Solar Heat Gain Coefficient .21
Visible Transmittance .57	Visible Transmittance .52	Visible Transmittance .47
Air Leakage < 0.3	Air Leakage < 0.3	Air Leakage < 0.3

UltraFlect... the Top Performing Dual Low-E Glass Option

Unlike traditional LowE glass, that has 1 coating on 1 glass surface, UltraFlect uses an unparalleled combination of 2 different High Tech reflective coatings with one coating on each piece of glass. UltraFlect represents the most dramatic advance in window glass technology in more than 10 years. Only UltraFlect breakthrough technology provides the R-5 performance of triple pane glass with the durability and appearance of dual pane glass.
